Roller Blinds

heliosscreen®

On a roll

We love the sun. We allow it to enter freely, bringing light and warmth, but it is not always a friend. Large glazed areas can produce blinding glare and searing heat in our homes and work spaces. To avoid this excess heat and dazzling light, we need to be able to control the sun's entry according to our needs, and preferably in a way which allows us to maintain visual contact with the world outside.

With Helioscreen Roller Blinds you can screen the entry of natural light, heat and sun radiation - enjoying views and privacy from the inside.

Simple to use, Roller Blinds come in an exclusive range of sun control fabrics, all designed to reduce glare and protect your furnishings from harmful UV radiation.

Also available is a full range of decorative sheers, translucent, and textured blackout fabrics that meet the highest demands of the contemporary design-conscious public

Control

Roller blinds can be either manually operated with a chain, or motorised - powered by Somfy®, the word leader in home automation. Helioscreen's motorised roller blind systems allow dynamic sun control at the touch of a button. Operate with a remote control, a wall switch, or full integration with building management systems (BMS). Further options for control are available such as light sensors and timers. When only the most luxurious sun control solutions will do, Helioscreen has you covered.

Fabric

Helioscreen sunscreen fabrics are functional, have great aesthetic qualities, and offer a variety of opacity, weaves and finishes.
Sourced from Australia and internationally, the ranges reflect trends in interior design and colour, complimenting both modern and classic design schemes.
Sunscreen fabrics have the unique ability to reduce radiated heat and glare, without losing visibility outside. The fabric technology maintains the colour spectrum of the outside view, whilst still providing day time privacy. Block out fabrics reduce heat and prevent light entering into the building, and translucent fabrics offer 24 hour privacy, but still allow filtered light in during the day.
Whether residential or commercial, Helioscreen's exclusive fabric collection improves the internal environment of the building, and the efficiency of heating, lighting and air conditioning systems.

Systems

Linked blinds
Simple to use, linked blinds can be operated using only one chain, eliminating unwanted hanging chains and enhancing the clean lines of your window. Helioscreen provide a wide variety of blinds that can be linked, two, three or four blinds at a time, in both manually operated and motorised options.

Dual blinds
For upmost flexibility of shading requirements in bedrooms and living areas, dual blinds make it possible to create privacy and heat/glare reduction by allowing two fabric choices to cover the one window. Dual blinds give you the power to choose the precise light requirements for your indoor living space.

Blackout
When the need arises for an almost completely darkened room, for home theatres, bedrooms, boardrooms and conference rooms, the Helioscreen Blackout System offers the solution. Available in chain operated, crank, or motorised versions, the Blackout System comprises of a cleverly designed 95mm square headbox that conceals the roller blind, and aluminium side channels with compressible brush seals that prevent light bleed around the fabric. When the blind is down the brush seal that is on the base bar completes the blackout effect, allowing audio visual displays to be enjoyed in the perfect setting.
With a selection of over 150 Dulux powder coat colours, match your aluminium frame to the Helioscreen Blackout fabric of your choice, and turn the lights down on the outside world.

MANUAL	Max width (m)	Linkable	Dual option	Warranty	Application
